Executive Summary

Computer Science undergraduate specializing in Artificial Intelligence, Full-Stack Development, and Intelligent Embedded Systems. Experienced in developing AI-powered applications, scalable web platforms, and IoT solutions using Python, React, FastAPI, TypeScript, and modern cloud technologies. Passionate about applied AI research, computer vision, and solving real-world engineering problems through innovative software and hardware solutions. Proven leadership experience managing multidisciplinary teams and organizing large-scale technical and cultural initiatives.

Education

Chennai Institute of Technology, Chennai 2024 – 2028
Bachelor of Engineering in Computer Science and Engineering

Experience

President — Isshoni Nihongo Mar 2026 – Present

- Lead a multidisciplinary team organizing Japanese language, cultural, and professional development events.
- Coordinate sponsorships, partnerships, logistics, budgeting, and volunteer management.
- Strengthened club growth through strategic planning and cross-cultural engagement.

Google Cloud Generative AI Virtual Internship Apr 2025 – Jun 2025

- Built AI applications using Vertex AI while gaining hands-on experience with prompt engineering, LLMs, model deployment, and Generative AI workflows.

Projects

Anomaly Grammar – Applied AI Research

- Developed a symbolic AI framework that transforms multi-channel physical time-series telemetry into structured symbolic grammars.
- Enables cross-domain anomaly transfer and predictive maintenance across heterogeneous physical systems.
- **Tech:** Python, Time-Series Analysis, Symbolic AI.

Smart IoT Plant Monitoring and Automated Irrigation System

- Designed an automated IoT plant monitoring and irrigation system utilizing soil moisture sensors, relays, and water pumps.
- Integrated an ESP32-CAM module to provide real-time visual tracking and environmental condition feedback.
- **Tech:** ESP32-CAM, IoT, Arduino, Sensors, Hardware Integration.

ORCA – Agentic Marine Intelligence Platform

- Developed an agentic conversational marine intelligence system leveraging multi-agent orchestration to process real-time geospatial, weather, and satellite data.
- Engineered a "Reason Ashore, Act Offline" paradigm compiling critical insights into signed, offline-executable Voyage Capsules for use beyond cellular coverage.
- **Tech:** FastAPI, React, LangGraph, PostGIS, Vercel, Supabase.

Skills

Programming Languages: Python, Java, C++, JavaScript, TypeScript

Frameworks & Technologies: React, Next.js, FastAPI, Node.js, Express.js, Tailwind CSS

AI & Computer Vision: OpenCV, YOLOv8, Time-Series Analysis, Prompt Engineering, LLM Applications

Databases: PostgreSQL, MongoDB, MySQL, Supabase

Developer Tools: Git, GitHub, Docker, Postman, VS Code, Vercel, Arduino IDE

Core Concepts: REST APIs, OOP, Data Structures & Algorithms, Embedded Systems, IoT

Certifications

- Google Cloud Generative AI Virtual Internship
- PCAP: Programming Essentials in Python
- Japanese Language Proficiency Test (JLPT) N4
- Cisco Networking Academy: Introduction to Cybersecurity
- Cisco Networking Academy: Introduction to Modern AI
- AWS Academy: Building with AWS, IoT Foundation, Kinesis Video Streams

Languages

English: Professional Proficiency

Tamil: Native

Japanese: JLPT N4
